The Benefits of a Private Anti-Doping Program

A private anti-doping program shows you are committed to winning ethically. It also allows you to identify problems early and confidentially deal with them before affecting the value and reputation of your brand.

- Enhance your Brand Image
- Private and Confidential
- Customizable Based on Your Monitoring Goals
- Intelligently Designed for Any Budget
- **NEW** Unobserved Collections Reduce Costs and Logistics
- Comprehensive WADA Banned Substances Monitoring
- Monthly Report Summary – Be the FIRST one to know!
- Supplement Verification (Optional)

Customized Programs for Any Budget

Testing Frequency Matters

Our expert team has been at the forefront of anti-doping science since 2004 and we can customize a program to meet your team's goals and budget. Our NEW BioLink secure remote collection eliminates the need for observed collections, which significantly reduces the cost of a private anti-doping program. We pass these savings on to you, giving you the option to test more frequently.

Many banned substances are very quickly excreted from the body, making them undetectable unless the athlete is being tested routinely. Let one of our experts work with you to start protecting your brand today.

Clomiphene

- Anti-estrogen agent, used to enhance anabolic steroids performance.

Stanozolol

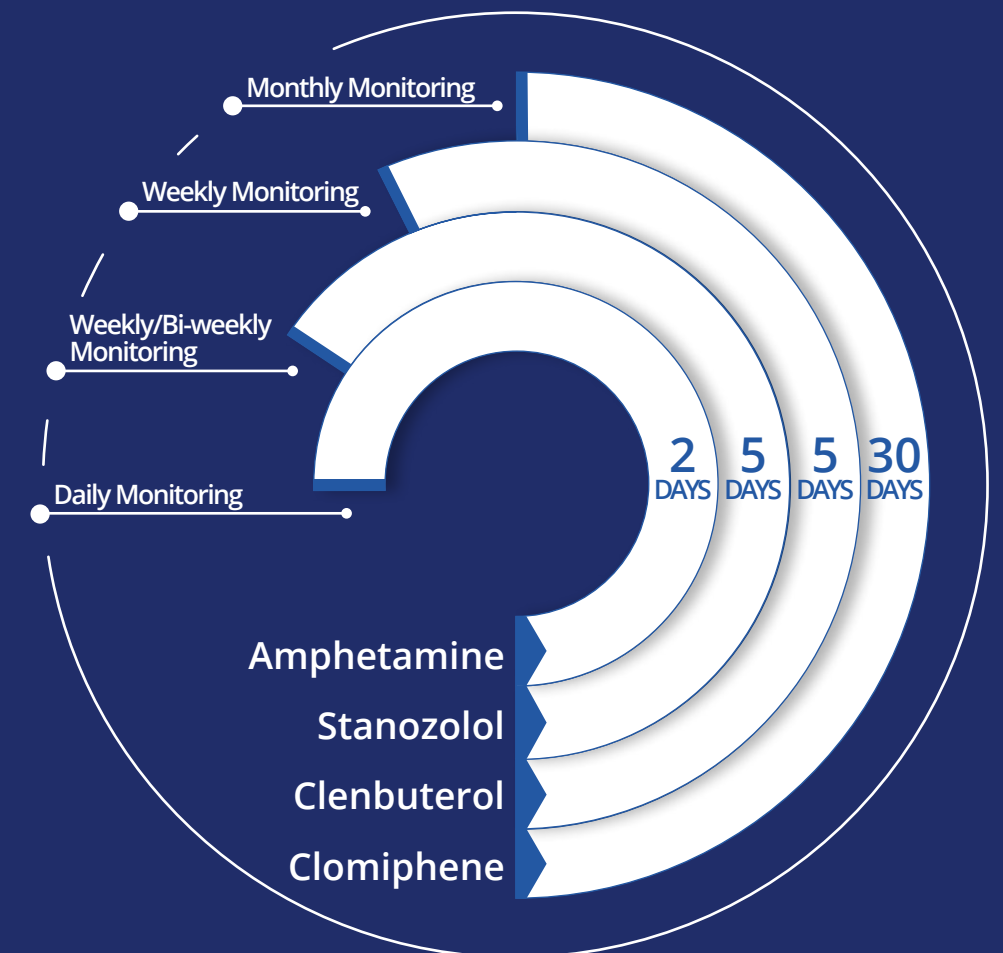

- Synthetic anabolic steroid used to enhance performance

Clenbuterol

- A drug often used for muscle building and weight loss

Amphetamine

- Stimulant used to increase focus and performance

NEW BioLink™

Recent doping scandals have shown that even observed collections can be circumvented. Our proprietary new collection procedure uses DNA to verify the source of the sample. DNA is the blueprint of life and cannot be changed, copied, or substituted in order to interfere with testing. BioLink eliminates the need for a WADA-style observed collection, allowing us to significantly reduce the cost of your anti-doping program.

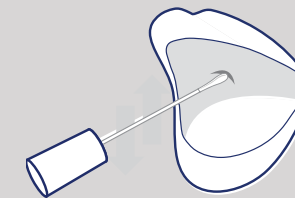

BioLink Technology

Our test is so accurate that we can tell the difference between urine submitted from the athlete and their immediate family – including fraternal twins. Our proprietary technology analyzes an athlete's DNA using 44 Single Nucleotide Polymorphisms (SNPs), 3 Gender Markers, and 5 Copy Number controls to determine if the sample is a match. The DNA is matched using Time-of-Flight Mass Spectrometry (TOF), a gold standard technique for anti-doping analysis. The results from the BioLink algorithm can produce accuracy in excess of 99.99%.

The BioLink™ Process

Genetic Identity Locked

BioLink swab collects DNA from the athlete's cheek.

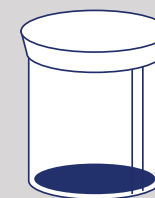

DNA analyzed by TOF-MS and ID Locked

Urine ID Verified

We verify that the DNA extracted from urine matches the genetic ID on file for the athlete

Genetic Match

YES

Report: **Match**
• Up to 99.99% Accuracy

NO

Report: **No Match**
• Substituted Sample
• Sample Adulterated
• Synthetic Urine
• Mislabeled Sample
